

Aspects of Urbanization in China: Shanghai, Hong Kong, Guangzhou (IIAS Publications)

China's rise as a global power is one of the major economic and political developments of the past fifty years. One seemingly inevitable outcome of industrialization is urbanization, and this definitive study surveys the key aspects of China's massive wave of urbanization with an emphasis on the changes to the quality of life of urban dwellers. With contributions from authors in a variety of fields, *Aspects of Urbanization in China* creates a resonant and rich portrait of China's global ambitions, as well as their culture, architecture, and economy. While the volume deals with disparate aspects of urbanization, the articles included are unified by a deep concern for Chinese citizens.
