

Macular Degeneration - Causes and Treatment (Your Eyes Book 3)

Macular Degeneration - for the Western world, this is the major cause of poor sight, far bigger than Diabetes and Glaucoma put together, but many people have never heard of it. Recent developments in the prevention and treatment of this disease means it is not the problem it was, but there is still a long way to go before it is stopped completely. I am a UK optometrist and in my nearly 40 years in practice I have seen many people go blind from this disease but I have also seen many changes that mean I can advise my patients how to help themselves prevent developing the disease and also what treatments are available. In this book, I will tell you what factors affect your risks of getting the disease. Some you can do nothing about whilst others, with a small change in your lifestyle can reduce your risks dramatically. I also go over the treatments you may need and explain how research will hopefully change the prognosis of this disease. To buy this book, please hit the BUY button and it will be sent to your e-reader so you can start reading it in minutes.
