

Responding to the Challenge of Evolution

The idea that the earth may not be millions of years old is not taken seriously by most of the population—until it is taught in school. Kevin Logan has written a readable, intelligent and entertaining guide to the debate, and to the issues behind it. Are the creationists out of their depth? Or is Darwin about to join Marx and Freud in the heap of fallen pillars of modernity? This book sets out the implications of the latest research, to help readers form their own opinions.
